

## A handy tool for small bag handling!

The bag vacuum lifter is designed for handling small bags. Very easy to use, this highly ergonomic tool relieves the operator of many heavy lifts. The tool can be integrated with various hoisting blocks and lifting equipment in combination with e.g. a revolving crane, rail systems or overhead crane rails.

The tool is powered by compressed air and features an easy-to-use control panel. Once the correct vacuum level has been achieved, a green lamp lights to indicate the lift can begin.

The bag vacuum lifter is available in different sizes and designs. Before manufacture, IBC always performs bag lift trials with the customer's bags.

See how easy it is to lift a small bag with the bag vacuum lifter.
