MAGNETAVSKILJARE/DETEKTOR

Magnetavskiljare/detektor

Vi erbjuder både magnetavskiljare och magnetdetektorer av mycket hög kvalitet. Vi kan erbjuda ATEX och EC 1935 certifikat och ett stort utbud av modeller. Se axplock nedan.

Overband self-cleaning magnetic separators DND-AC

DND-AC is designed to handle product stream with a high content of ferromagnetic particles. It is designed to capture in a quick and easy way valuable ferromagnetic particles from a product stream and at the same time the overband magnetic plate with automatic cleaning protects your machinery that subsequently treat the material.

Chute magnets ML

The inline chute magnet (because of its form also sometimes called "lantern" or external pole magnet) is designed for separation of small ferromagnetic particles from materials of worse bulk and pouring properties (such as cereals, flour, powder, sawdust etc.) that could clog the traditional magnetic grate separators. We deliver the chute magnet in a stainless steel housing that is to be connected to a pipeline in order to become its integral part.

Hopper magnets TM

Magnetic separator for the hoppers of injection moulding machines designed to separate iron tramp from free-flowing dry materials (such as regranulates, crushed plastic materials, plastic crumb, rejected mouldings etc.). The hopper magnet protects the moulding machines (with standard cone hoppers) and other processing equipment from damage by ferromagnetic particles.

Self-cleaning magnetic grate separators MSSJ-AC

Magnetic grate separator with automatic cleaning is designed to separate in a quick and easy way even the finest magnetic iron contamination from free-flowing substances of good bulk properties and to protect the machinery that subsequently treats these materials. Possibility to replace the individual magnetic bars (= lower repair and service costs)

Metalldetektor Sanitary

Metalldetektor Robust
